

O.C.F Pads

Polishing system

Profix open-cell polishing pads (O.C.F.) have been specially crafted for the most demanding painters and detailers. Using open-cell technology, these pads enhance cutting force while effectively dissipating heat from the polished coating. An additional advantage lies in the exceptional durability of the foam, reducing the load on the polishing machine. The fastening system is designed for longevity, featuring durable Velcro and foam.

The 125 mm spacer ensures highly comfortable working, thanks to its flexible disc base. Specifically designed for mechanical polishing it accommodates various paint coatings with the option to use coarse polishing pastes.
